

Meeting 2018-09-29

Attendees

- Fabian Hauser, fhauser
- Raphael Zimmermann, rzimmerm
- Prof. Dr. Andreas Steffen, SFF

Minute Taker: rzimmerm

Agenda

1. Administrative tasks
2. Where to start
3. Date and time for the next meeting
 - 2018-02-26, 09:00 in SFFs office

Discussions / Decisions

1. Administrative tasks
 - All documentation artifacts will be published on the project website.
 - We will use JIRA for project planning.
 - We will decide later, which continuous integration tools we use.
 - The decision must allow the INS to take over the project after the BA.
 - reasons for the decision must be documented.
 - Decisions on the programming language and frameworks are made later.
 - Our experience and productivity in a given eco system must be considered as well.
2. Where to start
 - Read the draft [XMPP for Security Information Exchange](#).
 - Learn more about XMPP (Read the specs and the mentioned XEPs).
 - IODEF payloads are not the main focus of this project.
 - It would be nice if a first draft is ready for the IETF Hackathon, starting on March 17.
 - Main goals of the project:
 - Design a solid architecture (Openfire plugin or standalone?).
 - Implement the requirements according to the IETF Draft:
 - Vanilla XMPP with Discovery und Publish/Subscribe XEPs.
 - Define Topics/Nodes and manage permissions.

- Administrative utilities such as purge, list topics, show number of items, identifier etc.
- Most is already implemented in the form of a proof of concept.

3. Date and time for the next meeting:

- 2018-02-26, 09:00 in SFFs office
